

Determine your potential to be a SERIAL KILLER

by taking this simple quiz!

All people possess the innate desire to kill one another. It's no wonder that society admires those who have the courage and motivation to actually carry out these feelings. A panel of experts states that at least one out of ten people will murder at some point in their lives. Only one in one hundred, however, will be skillful and knowledgeable enough to kill repeatedly over a period of time without being detected.

Though the life of a serial killer may seem glamorous to the casual observer, the road to success is not an easy one. The killer must be well groomed and polite. Many long years must be spent perfecting the proper image. Sexual preferences must sometimes be ignored in lieu of performing necessary tasks. An extraordinary ability to pose for photographers becomes not only crucial, but mandatory.

What traits do serial killers have in common? Based upon fifteen years of research, we have concluded that they are all very attractive individuals who are possessed by their own sexuality. That is, in fact, why they kill—to sexually arouse other people. They also are neat and organized, have a great deal of money, and don't mind taking a few risks in order to have a good time. Most people you speak to in public are, in actuality, planning on ways to stab you the next time you leave your home. Think about it...how many people have you talked with in the past week? Do you feel concerned about it now?

The following quiz was developed to help you determine how likely it is that you could become a serial killer. Those about to enter college should consider taking this quiz. Positions in this field are endless and the rewards are tremendous. Most leading scholars agree that this is the single most important quiz ever developed. Please answer the questions honestly.

ANSWERS

- 1) A: Most serial killers initially identified with clowns they saw on television when they were children. A clown is a symbol of fun and happiness, as well as depression and genocide.
- 2) C: As odd as it may sound, toothpaste is a very important commodity to the up-and-coming serial killer. Seeing one's classmates as toothpaste is the same as wanting to have a glistening set of white teeth. An endearing smile is an invaluable asset in attracting potential victims.
- 3) D: Most serial killers will admit that they masturbated while looking at photographs of Jim Nabors when they were young, often ejaculating on his religious album covers. This early attraction to repugnant images reveals much of the inner self.
- 4) D: When they can't think of the words to a song, many serial killers may try to think of a different song, but they are rarely successful. The frustration they experience from trying to focus on another song often leads to their committing a violent rape or murder.
- 5) A: By assisting a friend in making a difficult period even more difficult, a punishment and reward system is established for the typical killer. Even though one person may die, for instance, others can always follow.
- 6) B: Nice, fresh apple pie is a symbol of power and strength. Young boys often see themselves as a slice of apple pie, without ever considering what sort of people the other slices are.
- 7) C: In an interview just prior to his execution, Ted Bundy admitted to screaming obscenities at oncoming traffic. By publicly sharing his favorite curse words, the typical serial killer feels that he is in control of other peoples' lives.
- 8) D: Reading the Bible will make the typical serial killer laugh. Therefore, his mood might possibly be altered in a positive way by sneaking away and reading one.
- 9) D: Most serial killers see their nasal passages as being entirely too small. Though some may use drills and explosives, X-acto knives are most often used in an attempt to enlarge the nasal passages. If you know someone with a bloody nose, they may very well eventually try to kill you.
- 10) B: All serial killers hate hearing the word 'pussy' and will bolt at the mere mention of it.
- 11) D: Closely examining the genital area is an ancient way of saying hello. Doing this might be a way of making some form of communication with the boy. For example, he may respond by saying hello in his own special way.
- 12) **There is no correct answer for #12.**
